OUR STORY
In motion around you.
OUR VALUES
Create value, share values.

Our values were set more than 50 years ago by our founders. They and their vision guided our success and continue to be the foundations on which we will build the next 50 years. They guide our actions, define our future targets and remind us of our responsibilities. Our customers choose us for our innovative capacity and our efficiency, our reliability, integrity and the quality of our work. The commitments of EuroGroup are for reciprocal correctness, cooperation with our partners, transparency which generates trust. Only by sharing common principles can we strengthen and motivate our process of continuous improvement.

Open, fair and ethical conduct
Initiative and determination
Passion for business
Independence and focus on results
Value people
Sustainable development / global thinking
Excellence in manufacturing and technology

OUR VISION

EuroGroup provides to its customers innovative products of the highest quality, as our contribution to sustainability and environmental well-being. As a family company and a company of families our Vision is founded on the objective to create a better world for our children. Our employees are conscious of their daily commitment to our customers and the future. Our engineers know that by implementing a logical and methodical approach we can achieve our Vision and set higher standards.

The EuroGroup Vision is the lifestyle of our global family, to preserve the planet we love.
EuroGroup is always with you. Our mission is to provide solutions, products and services which exceed your expectations.

We do this for every application requiring motion by electrical rotation.

We do this from the global network of EuroGroup facilities supporting our international high technology partners.

We do this proactively since for EuroGroup, motion is life.
The key for a successful business is to process the highest quality raw materials. The electrical steel processed by EuroGroup can be subdivided into 4 different groups.

- NGO semi-processed steel
- NGO fully-processed steel
- NGO fully-processed high frequency steel
- GO steel

Over many years of continuous business with the world’s leading steel mills, the purchasing organisation of EuroGroup has developed important and strategic partnerships based upon mutual respect and the desire to have a long term competitive cooperation. These partnerships have enabled EuroGroup to have in-depth knowledge of global steel sources in order to secure stability of supply, whilst maximising technological development and competitiveness. This strategy has successfully enabled EuroGroup to deliver value to its customers and suppliers.
INNOVATION AND DEVELOPMENT

Every new challenge a new goal.

The market for electric motors is increasingly demanding in terms of product complexity, shorter design to market time, price competitiveness and high service level. EuroGroup meets these demands as a global partner who can offer solutions from dedicated production facilities, which provide the best fit for all our customers’ requirements.

To achieve this we have become master craftsman of our historical technologies (tool design and manufacture, blanking, die-casting, core assembly and slinky). We also cooperate as partners in the development of new families of magnetic steels. We identify and develop cutting-edge new technologies (for example laser welding, self-bonding steels, in-die gluing) and approach new business opportunities with a structured Project Management, who have access to fast prototyping and numerical tools to simulate processes and designs to mitigate risks in serial production.

Advanced project risk assessment

Corporate level Engineering Team

Feasibility Study APQP Management

Local company based Engineering Teams

Project managers certified by IPMA

FAST PROTOTYPING CAPABILITIES

3D printing

Laser cutting

Modular progressive or compound blanking tools

Laser welding flexible cell

NUMERICAL SIMULATION TOOLS

Mold flow analysis for aluminium die-casting

Mold flow analysis for plastic injection

Finite element analysis magnetic field

Virtual plant simulator
RANGE OF TECHNOLOGIES
To offer the best solutions to our customers.

Corrado: Progressive Carbide and Steel dies

Euroslot Tools: Hybrid Progressive Compound dies

Euroslot Tools: Compound dies

Euroslot Tools: Notching tools

Euroslot Tools: Die-casting molds

Kuroda: Glue-Fastec System

Euroslot Tools: Compound dies

Slitting

Punching

Blanking

Notching

Helical winding

Laser cutting
ASSEMBLY

To offer the best solutions to our customers.

**RANGE OF TECHNOLOGIES**

- Copper die-casting
- Laser welding
- Aluminium die-casting
- Glue Fastec
- Shaft production and assembly with die-casted rotor
- Plastic over-molding
- Shaft insertion with liquid hydrogen
- Tig and Mig welding
- Laser welding
- Annealing and steam bluing
- Coils thermal treatment
- Cleating
- Backlack
- Aluminium die-casting
- Copper die-casting
INDUSTRY 4.0
Protagonists of the 4th industrial revolution.

Information Systems within the group are developed and broken down to 4 main lines:

- Utilisation of data, computing power and connectivity
- Analytics
- Human-machine interaction (touch interface)
- Utilisation of robotics and 3D printers, transition from digital to real and optimisation of energy use (smart energy)
QUALITY

Raising the bar.

The commitment of quality in every aspect of our business, to exceed expectations. This applies equally to commerce and service. Mechanical and electrical control of raw materials. Measurement of assembled and loose laminations. Control of contamination by utilising clean rooms and particle monitoring.

CERTIFICATIONS

Independent accreditation.

STATE OF THE ART CONTROLS

Cleanliness

X-Ray

Gauge calibration

2D & 3D measurement

Control of mechanical & magnetic parameters
AUTOMOTIVE

Comfort & safety.

1. Starter motor
2. Alternator stator core
3. Electric Power Steering motor (ASM)
4. Electric Power Steering motor (PMM)
5. Window lift motor
6. Front wiper system motor
7. Rear wiper system motor
8. Engine cooling motor
9. Sunroof motor
10. HVAC motor
11. Electric turbo motor
12. ABS motor
Automotive

In response to the demand for the electrification of vehicle drive trains, EuroGroup became Tier-1, developing and implementing high tech solutions worldwide in the following key areas:

- Cleanliness through white room and clean processes
- Highly efficient blanking
- Innovative assembly solutions based on interlocking, laser welding, glue Fastec, quick bonding and backlack
- Automated rotor die-casting cells
- Added value and improved quality by integration of the shaft insertion, CNC milling and balancing for rotors
- State of the art laboratory testing devices

Hybrid and Full Electric Powertrain

Reducing the reliance on fossil fuels.
TYPICAL APPLICATIONS
EuroGroup everywhere, for all applications.

ENERGY
INDUSTRIAL MOTORS
REFRIGERATION
VENTILATION

HOUSEHOLD APPLIANCES
TRACTION
PUMPS
POWER TOOLS
HOME AUTOMATION
GEARED MOTORS
IEC LAMINATIONS

Standard motors.

Full range of laminations and cores available for IEC standard frames from size 56 - to size 355 2 / 4 / 6 / 8 poles.

Get your access code to our on-line catalogue
The future has a great past.

Founded in 1933, Corrada has emerged as a global leader in the design and manufacture of carbide and steel progressive lamination dies, in interlocked and loose form, for electrical machines. Experienced and qualified staff together with constantly updated technologies are the key features to meet the market demands.

Euroslot Tools designs and produces compound single-notching dies for stamping electrical steel laminations up to 1,300 mm in low and high volumes. Highly qualified people and advanced production techniques enable Euroslot Tools to react quickly to market demands. Euroslot Tools has innovative solutions the latest of which is a new technology combining the precision of compound tools with the productivity of progressive tools.
